AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions of claims in the application.

**Listing of Claims** 

Claim 1 (currently amended): A vacuum heat insulating material, comprising: with a

construction in which

a core material; [[and]]

a gas adsorbent; and are housed in

a bag made from a gas barrier film, housing the core material and the gas adsorbent,

wherein [[and]] the interior of the bag has a reduced pressure and the bag is thereof is reduced in

internal pressure thereof and air-tightly sealed, wherein the core material is a molded product

obtained by coating a resin binder on inorganic fibers having an average fiber diameter in the

range of from 3 to 5 µm at a coating amount in the range of from 0.5 to 1.5 wt % relative to the

fibers and applying heat pressing to pressing the inorganic fibers, or a laminate fabricated by

stacking two or more sheets of the molded product.

Claim 2 (original): The vacuum heat insulating material according to claim 1, wherein the

inorganic fibers are one or more kinds selected from the group consisting of glass fibers, ceramic

fibers, rock wool, silica alumina wool.

Application No. 10/814,807

Attorney Docket No. 042320

Claim 3 (currently amended): The vacuum heat insulating material according to claim 1

or [[and]] 2, wherein the resin binder is one or more selected from the group consisting of phenol

resin, NBR rubber modified high ortho-phenol resin, NBR rubber modified phenol resin,

melamine resin, epoxy resin, NBR, nitrile rubber, and acrylic rubber, silica alumina and the like.

Claim 4 (withdrawn): A manufacturing method for a vacuum heat insulating material in

which a binder is coated on inorganic fibers having an average fiber diameter in the range of

from 3 to 5 µm at a coating amount in the range of from 0.5 to 1.5 wt % relative to the fibers, a

core material made of a molded product obtained by pressure-molding the inorganic fibers while

being heated or a core material fabricated by stacking two or more sheets of the molded product

together with a gas adsorbent is housed in a bag made from a gas barrier film, and the interior of

the bag is reduced in internal pressure thereof, followed by air-tight sealing of an opening thereof.

Claim 5 (withdrawn): The manufacturing method for a vacuum heat insulating material

according to claim 4, wherein the opening is air-tightly sealed by a double heat seal.
